**Final Thoughts**

1. Protect your property by creating defensible space.
2. Create zones around your home.
3. Select plants high in water content, no resin, group them, and irrigate efficiently/deeply.
4. Remove any flammable material within 30' of a structure.
5. Create a low maintenance garden to minimize upkeep.
6. Use hardscaping to reduce maintenance and create fire breaks.
7. Create a maintenance schedule.

Firescape YOUR Landscape!
A DIY guide to get you started
Steps when firescaping:

1. Create defensible space around your home or structure:
   - Zone 1 is within 30 feet (Low-lying plants)
   - Zone 2 is 30-100 feet (Group medium plants)
   - Zone 3 is 100+ feet (Trees & Large Shrubs)

2. Design your hardscape features first:
   - Use pathways, rocks, dry rivers, and cement retaining walls to create fire breaks.

3. Plantings:
   - Select high water-retention, low resin plants.
   - Plant in groupings with space in-between.
